Clause	Requirement - Test	Result - Remark	Verdict

#### **Summary of testing**

- 1. The appliance was tested according to EN 14511.
- 2. The SEER and SCOP were calculated according to EN14825.
- 3. All the models are indeticial with each other except the panels. All the tests were performed on the model GWH09AVCXB-K6DNA1B as representative.
- 4. The samples are engineering samples without serial numbers.

Class of temperature	T1
Туре	Split Air Conditioner
Degree of protection	Indoor unit:IPX0 Outdoor unit:IPX4
Supply Connection	Type Y attachment
Possible test case verdicts:	
- test case does not apply to the test object:	N/A
- test object does meet the requirement:	P(Pass)
- test object does not meet the requirement:	F(Fail)
Testing	
Date of receipt of test item	2022.12.20
Date (s) of performance of tests:	2022.12.20-2023.01.06

#### **General remarks**

- This appliance is split type air conditioner, which consist of one outdoor unit and one indoor unit.
- ➤The indoor unit is a wall mounted type air conditioner, which is usually not accessible (only for maintenance purpose).
- ➤ Cooling and heating modes are applied by reverse cycle method. In the heating mode, defrost operation may be applied.
- >The indoor unit is equipped with an infrared wireless battery powered remote control unit.

ausc	requirement - rest	verdict
3	Compliance with ecodesign requirements shall be measured and calculated in accordance with requirements	Р
Article 4	set out in Annex II.  Conformity assessment	Р
1	The conformity assessment	
	procedure referred to in Article 8 of Directive 2009/125/EC shall be the internal design control set out in Annex IV to that Directive or the management system set out in Annex V to that Directive.	P
2	For the purposes of conformity assessment pursuant to Article 8 of Directive 2009/125/EC, the technical documen-tation file shall contain the results of the calculation set out in Annex II to this Regulation.	P
Article 5	Verification procedure for market surveillance purposes	Р
	Member States shall apply the verification procedure described in Annex III to this Regulation when performing the market surveillance checks referred to in Article 3(2) of Directive 2009/125/EC for compliance with requirements set out in Annex I to this Regulation.	Р
Article 6	Benchmarks	-
	The indicative benchmarks for best-performing air conditioners available on the market at the time of entry into force of this Regulation are set out in Annex IV.	-
Article 7	Revision	-
	The Commission shall review this Regulation in the light of technological progress and present the result of this review to the Ecodesign Consultation Forum no later than 5 years from the date of the entry into force of this Regulation. The review shall in particular assess the efficiency and sound power level requirements, the approach to promote the use of low-global warming potential (GWP) refrigerants and the scope of the Regulation for air conditioners and possible changes in market share of types of appliances, including air conditioners above 12 kW rated output power. The review shall also assess the appropriateness of the standby and off mode requirements, seasonal calculation and measurement method, including considerations on the development of a possible seasonal calculation and measurement method for all air conditioners in the scope for cooling and heating seasons.	-
Article 8	Entry into force and application	Р
	<ol> <li>This Regulation shall enter into force on the 20th day following its publication in the Official Journal of the European Union.</li> <li>It shall apply from 1 January 2013.</li> </ol>	Р
Annex I	Ecodesign requirements	Р

Article 3	Responsibilities of suppliers	F	Р
1	Suppliers shall take action as described in points (a) to (g)		-
	(a) a printed label is provided for each air conditioner respecting energy efficiency classes as set out in Annex II. The label shall comply with the format and content of information as set out in Annex III. For air conditioners, except single and double duct air conditioners, a printed label must be provided, at least in the packaging of the outdoor unit, for at least one combination of indoor and outdoor units at capacity ratio 1. For other combinations, the information can be alternatively provided on a free access web site	F	P
	(b) a product fiche, as set out in Annex IV, is made available. For air conditioners, except single and double duct air conditioners, a product fiche must be provided at least in the packaging of the out door unit, for at least one combinationof indoor and outdoor units at capacity ratio 1. For other combinations, the information can be alternatively provided on a free access web site	F	P
	(c) technical documentation as set out in Annex V is made available electronically on request to the authorities of the Member States and to the Commission	F	P
	(d) any advertisement for a specific model of an air conditioner shall contain the energy efficiency class, if the advertisement discloses energy-related or price information. Where more than one efficiency class is possible, the supplier or the manufacturer, as appropriate, shall declare the energy efficiencyclass for heating at least in 'Average' heating season. Information in the cases where end-users cannot be expected to see the product displayed is to be provided as set out in Annex VI	F	P
	(e) any technical promotional material concerning a specific model of an air conditioner which describes its specific technical parameters shall include the energy efficiency class of that model as set out Annex II	F	P
	(f) instructions for use are made available	F	Ρ
	(g) single ducts shall be named 'local air conditioners' in packaging, product documentation and in any advertisement material, whether electronic or in paper.	N/	/A
2	The energy efficiency class shall be determined as set out in Annex VII.	F	Р

	Contact details for obtaining more information on the setting of the unit  Gree Electric Appliances Inc. of Zhuhai  Jinji West Road, Qianshan, Zhuhai, Guangdong 519070, P.R.China  Email: greerzsykt@cn.gree.com							

<sup>(\*)</sup> For staged capacity units, two values divided by a slash (') will be declared in each box in the section 'Declared capacity of the unit' and 'declared EER/COP' of the unit.

For units with capacity control marked 'staged', two values for the highest and lowest, noted 'hi/lo' divided by a slash ('/') will be declared in each box under 'Declared capacity'.

--End of report--

<sup>(\*\*)</sup> If default Cd = 0,25 is chosen then (results from) cycling tests are not required. Otherwise either the heating or cooling cycling test value is required.
